Name : Debapriya Ghosh

Reg no : 25BOE10094

Branch : Bioengineering

Year : Ist Year B.Tech

Course code : CSE0001

Course title : Digital Literacy

Date : 26 March 2026

Introduction

This project is a Digital Literacy Portfolio developed as part of the Digital Literacy course. The aim of this project is to understand and apply essential digital skills required in today's academic and professional environment. Through a series of tasks, the project covers topics such as digital awareness, professional online presence, coding platforms, email etiquette, and cybercrime awareness.

Each task focuses on a different aspect of digital literacy, helping to build practical knowledge and responsible digital behaviour. This project has provided valuable insights into the effective and safe use of digital technologies, which will be useful throughout my academic journey and future career.

Task 1 – Digital Literacy Infographic

I created a digital literacy awareness infographic using Canva, a user-friendly online design tool. The purpose of this infographic is to help students understand the importance of digital literacy in today's digital world. The design includes key topics such as the meaning of digital literacy, safe internet practices, useful digital tools for students, and basic email etiquette. I used a structured layout with clear headings, icons, and short bullet points to make the content visually appealing and easy to understand.

While creating the infographic, I found it interesting to explore different design templates and elements available in Canva. One challenge I faced was selecting the right layout and colour combination to maintain clarity and balance. Overall, this task helped me improve my creativity and understand how to present information in a clear and effective way.

Task 2 – Digital Portfolio

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. GitHub is used for sharing and managing coding projects, LinkedIn helps in building a professional network, and Kaggle is useful for data science and learning through practice. I updated my GitHub profile by creating a README file with my basic details and interests. On LinkedIn, I added my educational background and course details.

These platforms will help me build my professional identity and improve my skills over the next four years. I plan to regularly update my profiles with new projects, achievements, and learning experiences. This task helped me understand the importance of maintaining a professional online presence.

Task 3 – Platforms

In this task, I explored both coding practice platforms and collaborative tools. I used HackerRank to solve a beginner-level coding problem, which helped me understand basic problem-solving and programming logic. It was a good introduction to coding practice platforms that are useful for improving technical skills.

Additionally, I created a Google Form to design a digital literacy awareness quiz consisting of five questions. I also linked the responses to a Google Sheet to analyze the data collected. This helped me understand how online tools can be used for collaboration, data collection, and analysis.

Overall, this task enhanced my familiarity with important digital platforms that will support my academic learning and skill development in the future.

Task 4 – Email Etiquette

In this task, I learned about professional email communication and responsible online behavior. I wrote two formal emails: one requesting an extension for an assignment and another expressing interest in a summer internship. While writing these emails, I focused on maintaining proper structure, including a clear subject line, polite tone, and appropriate closing.

I also created a checklist of social media do's and don'ts to promote responsible online behaviour among students. This task helped me understand the importance of clear and respectful communication in both academic and professional settings.

Task 5 – Cybercrime Awareness

In this task, I explored the concept of cybercrime by studying phishing attacks. I learned how attackers use fake emails and websites to trick users into sharing sensitive information. What surprised me the most was how easily users can be misled if they are not careful while browsing or checking emails.

This task made me more aware of online threats and the importance of following safe practices. As a result, I will be more cautious while clicking on links and sharing personal information online. I will also make sure to use strong passwords and verify sources before trusting them.

Conclusion

This project helped me understand the importance of digital literacy in today's world. Through various tasks, I learned how to use digital tools effectively, maintain a professional online presence, and communicate responsibly through emails and social media. I also gained awareness about cybercrime and the importance of staying safe online. Overall, this project enhanced my digital skills and prepared me to use technology in a more efficient and responsible way in my academic and professional life.
